

DAY 1

1. Science

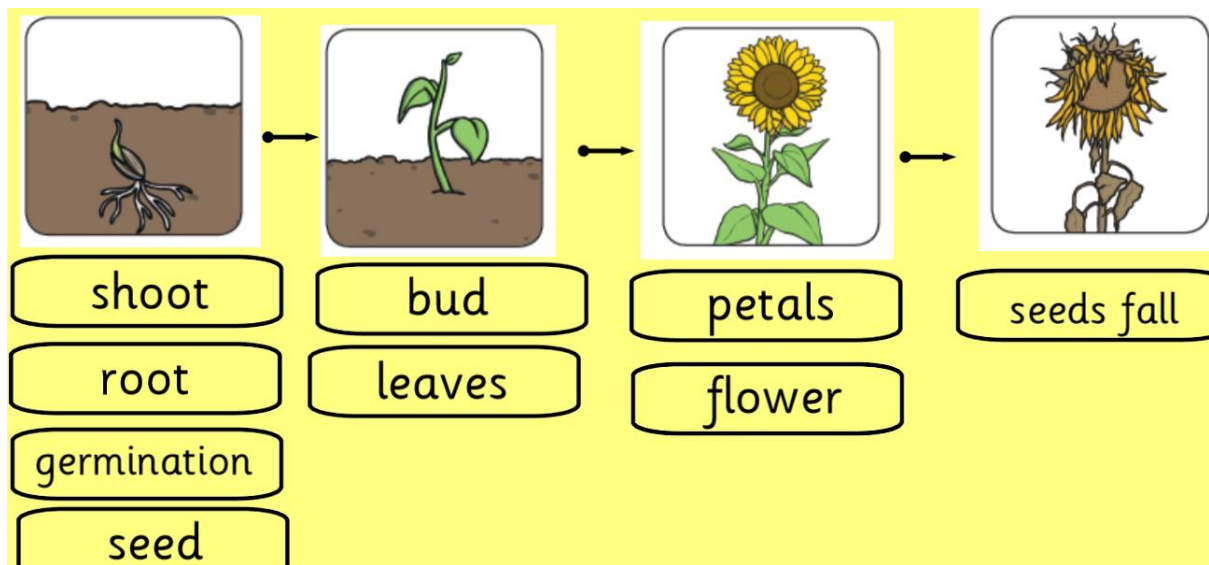

Go through the life cycle of a Sunflower powerpoint saved below and watch the youtube video to learn about the life cycle of a Sunflower.

<https://www.youtube.com/watch?v=JP27pEXqBy0>

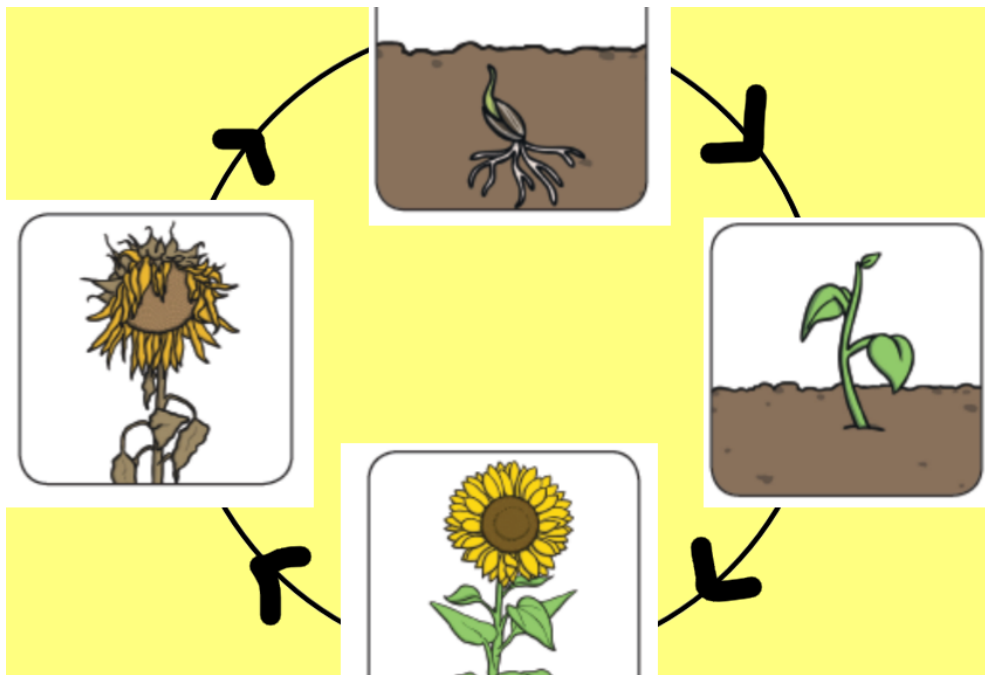

Have you ever planted anything before? Do you have any Sunflowers in your garden?

2. Explanation

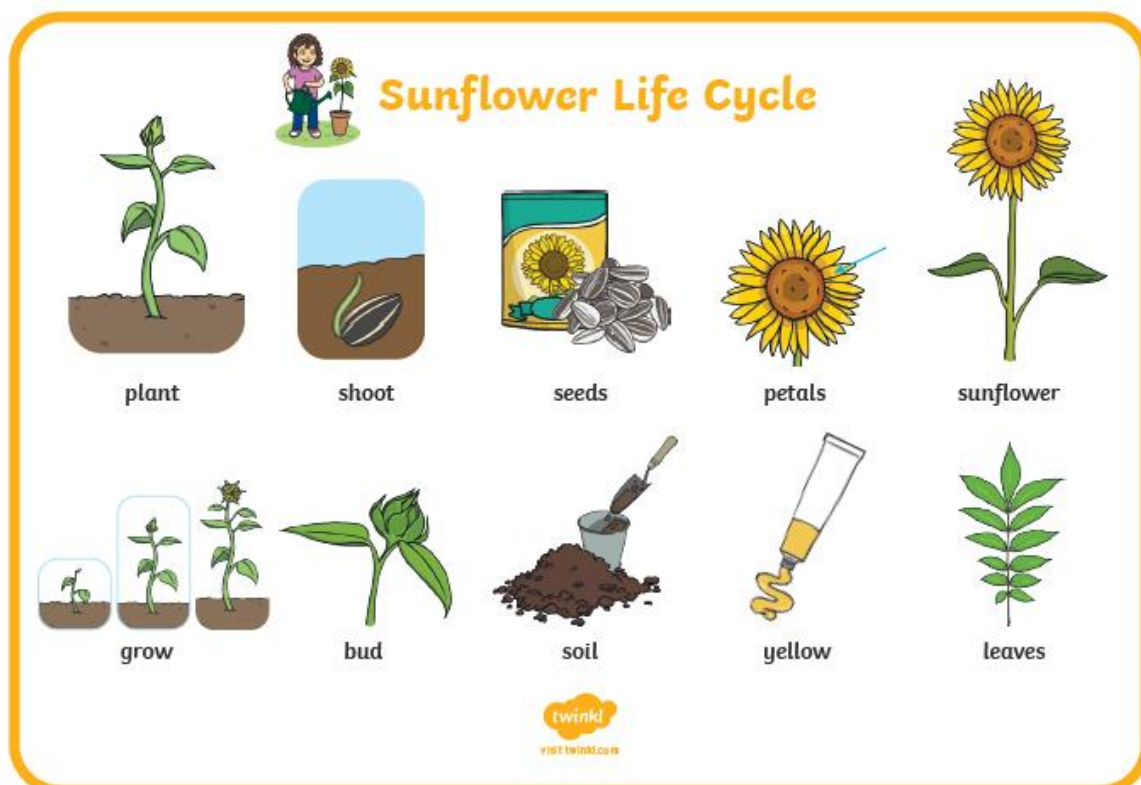

Can you use the sequencing sheets saved below to order the life cycle of a Sunflower? Try to complete the sheet where you have to write sentences to explain the life cycle.

Make sure to discuss that the life cycle can be shown in a circle as when the Sunflower dies and the seeds fall, they can replant in the soil and a new Sunflower will grow.

Then, verbally explain the life cycle of a sunflower to someone in your family. You could even record yourself and listen to your explanation back. Make sure you use clear steps and include the words from the life cycle word mat below in your explanation.

You could pretend that you are the voiceover for the video saved below, showing the Sunflower growing, like on a nature TV programme!
